

Spacetime is not a stage; it is a computation.

The Kuratowski Calculus derives the constants of nature from two simple rules: causal finitism and planarity preservation. By replacing the smooth manifold with a finite directed acyclic graph, this work demonstrates how gravity, gauge symmetry, and three generations of matter emerge as mathematical necessities.

From the discrete differential to dessins d'enfants, this volume provides the complete mathematical bridge from graph rewriting to the Standard Model of particle physics.

*No free parameters. No tuned couplings.
Just the graph.*
